**Department of Pathological Physiology  
EDUCATIONAL WORK PROGRAM**

**for the discipline**

**«CORRECTION OF UNDESIRABLE ANIMAL BEHAVIOR»**

**The level of higher education  
SPECIALIST COURSE**

**Specialty 36.05.01 Veterinary Medicine  
Full-time education  
Education starts in 2024**

Reviewed and accepted  
at a meeting of the department  
on 2 May, 2024  
Protocol No. 12

Head of the department  
of pathological physiology  
Doctor of Veterinary Science, Professor  
O.V. Kryachko

Saint Petersburg  
2024

## **1. PURPOSE AND OBJECTIVES OF THE DISCIPLINE**

The purpose of mastering the discipline "Correction of unwanted behavior of animals" is to give students knowledge of the main classes of behavioral disorders, the pathogenesis of behavioral disorders, the principles of their diagnosis and treatment. The section on behavioral development, normal behavior, and communication between dogs and cats provides insight into the etiology of behavioral abnormalities. Information about teaching and training methods gives the student reliable tools to modify unwanted behavior. Mastering the methodology of conducting behavioral consultation allows you to establish contact and effectively cooperate with the owner of the animal during the behavior modification program. In addition, the relevant sections of the program reflect the mechanisms of action and principles of use of psychotropic drugs, as well as the economic and social aspects of behavioral counseling.

## **2. THE LIST OF THE PLANNED RESULTS OF THE DISCIPLINE (MODULE), CORRELATED WITH THE PLANNED RESULTS OF THE REALISED EDUCATIONAL PROGRAM**

As a result of mastering the discipline, the student prepares for the following types of activities, in accordance with the educational standard of the Federal State Educational Standard 36.05.01 "Veterinary."

Types of tasks of professional activity:

- Medical;
- Expert and control;
- Scientific and educational.

### **Competencies of the student formed as a result of mastering the discipline**

The process of studying the discipline is aimed at the formation of the following competencies:

#### **A) Professional Competencies (PC):**

Types of tasks of professional activity:

- Medical;
- Expert and control;
- Scientific and educational.

Anamnesis of animal life and disease to identify the cause of disease, conduct a general clinical study of animals in order to establish a preliminary diagnosis and determine the ongoing research program

PC-1 ID-1 To be able to collect and analyze information about the origin and purpose of animals, the method and conditions of husbandary, feeding (anamnesis of animal life), including use of sensor devices, mechanisms, sensors, tags, etc.

PC-1 ID-2 To be able to collect and analyze information about the occurrence and manifestation of animals diseases, previously transmitted diseases, epizootological conditions (anamnesis of animal disease), with the use of sensor devices, mechanisms, sensors, tags, etc.

PC-1 ID-3 To be able to fix animals to ensure safety during a clinical trial

PC-1 ID-4 To be able to perform a clinical examination of animals, using common methods: examination, palpation, percussion, auscultation and thermometry.

PC-1 ID-5 To be able to establish a preliminary diagnosis based on anamnesis analysis and clinical research, using general methods.

PC-1 ID-6 To know the method of collecting animals anamnesis of life and disease.

PC-1 ID-7 To know the factors of animal life that contribute to the occurrence of infectious and non-infectious diseases.

PC-1 ID-8 To know the forms and rules for filling out the journal for the registration of sick animals and the animal's medical history, including in electronic form in accordance with the requirements of veterinary rules.

PC-1 ID-9 To know the methods of animals' fixation during clinical examination.

PC-1 ID-10 To know the technique of conducting an animal clinical study, using general methods, in accordance with the guidelines, instructions, rules for the diagnosis, prevention and treatment of animals.

### 3. THE PLACE OF DISCIPLINE IN THE STRUCTURE OF THE MPEP

The discipline B1.V.DV.02.02 "Correction of undesirable behavior of animals" refers to the discipline of choosing the federal state educational standard of higher education in the specialty 36.05.01 "Veterinary Medicine" (specialty level).

Mastered in the 4th semester in full-time education.

This educational discipline, the following knowledge, skills and abilities are formed by previous disciplines: general biology - you need to know the systematics and classification of animals, the basics of nervous activity, ecological systems, be able to determine the types of animals, have the skills to conduct animal systematics: know the anatomy of animals; the basics of higher nervous activity, biology with the basics of ecology.

The list of subsequent training disciplines that require knowledge, skills and abilities formed by this training discipline:

- Clinical diagnostics
- Clinical pharmacology
- Internal non-contagious diseases
- Instrumental diagnostic methods
- Immunology
- General and private surgery.

### 4. 4. SCOPE OF DISCIPLINE "CORRECTION OF UNWANTED BEHAVIOR OF ANIMALS "

#### 4.1. SCOPE OF DISCIPLINE "CORRECTION OF UNWANTED BEHAVIOR OF ANIMALS " FOR FULL-TIME EDUCATION

## **9. METHODOLOGICAL GUIDELINES FOR STUDENTS ON EDUCATION OF THE DISCIPLINE**

Methodological recommendations for students are a set of recommendations and explanations that allow the student to optimally organize the process of studying this discipline.

The content of the guidelines, as a rule, may include:

- Tips for planning and organizing the time required to study the discipline. Description of the student's sequence of actions, or "discipline study script." Morning time is the most fruitful for educational work (from 8-14 o'clock), then afternoon time (from 16-19 o'clock) and evening time (from 20-24 o'clock). The most difficult material is recommended for study at the beginning of each time interval after rest. After 1.5 hours of operation, a break is required (10-15 minutes), after 4 hours of operation, the break should be 1 hour. Part of the scientific organization of work is mastering the technique of mental labor. Normally, a student should devote about 10 hours a day to teaching (6 hours at a university, 4 hours at home).

Recommendations for working on lecture material

In preparation for the lecture, the student is recommended:

- 1) to view the recordings of the previous lecture and restore the previously studied material in memory;
- 2) to view the upcoming material of the future lecture;
- 3) if an independent study of individual fragments of the topic of the last lecture is set, then it must be performed without delay;
- 4) to tune psychologically to the lecture.

This work includes two main stages: lecture notes and subsequent work on lecture material.

By taking notes is meant the compilation of a summary, i.e. a brief written statement of the content of something (oral speech - speech, lecture, report, etc., or a written source - document, article, book, etc.). The method of work when inspecting oral speeches differs significantly from the method of work when inspecting written sources.

Taking notes on written sources, the student has the opportunity to repeatedly read the desired passage of the text, reflect on it, highlight the main thoughts of the author, briefly formulate them, and then write it down. If necessary, he can note his attitude to this point of view. Listening to the lecture, the student should postpone most of the complex of the above works for another time, trying to use every minute to record the lecture, and not to comprehend it - there is no time left for this. Therefore, when reviewing a lecture, it is recommended to separate the fields for subsequent entries on each page in addition to the summary. After recording a lecture or compiling a summary, you should not leave work on the lecture material before starting preparation for the test. It is necessary to do as early as possible the work that accompanies the examination of written sources and which could not be done during the recording of the lecture - read your notes, deciphering individual abbreviations, analyze the text, establish logical connections between its elements, in some cases show them graphically, highlight the main thoughts, note issues requiring additional processing, in particular, teacher consultations.

When working on the text of a lecture, a student should turn special attention to the problematic issues posed by the teacher when giving a lecture, as well as to his tasks and recommendations.

For each lecture, practical lesson and laboratory work, the number is leaded, topic, list of issues under consideration, volume in hours and links to the recommended literature are provided. For classes conducted in interactive forms, their organizational form should be indicated: computer simulation, business or role-playing game, analysis of a specific situation, etc.

- Practical preparation recommendations

Practical (seminar) classes form an important part of the professional training of students. The main goal of conducting practical (seminar) classes is to form analytical, creative thinking among students by acquiring practical skills. Also, practical classes are held in order to deepen and consolidate the knowledge gained at lectures and in the process of independent work on regulatory documents, educational and scientific literature. When preparing for a practical lesson for students, it is necessary to study or repeat theoretical material on a given topic.

When preparing for a practical lesson, the student is recommended to follow the following algorithm;

- 1) get acquainted with the plan of the upcoming lesson;
- 2) study the literature sources that have been recommended and familiarize yourself with the introductory notes to the relevant sections.

Methodological guidelines for practical (seminar) classes in the discipline, along with the work program and schedule of the educational process, refer to methodological documents that determine the level of organization and quality of the educational process.

The content of practical (seminar) classes is recorded in the working curricula of the disciplines in the sections "List of topics of practical (seminar) classes".

The most important component of any form of practical training are tasks. The basis of the task is an example that is understood from the standpoint of the theory developed in the lecture. As a rule, the main attention is paid to the formation of specific skills, which determines the content of students' activities - problem solving, laboratory work, clarification of categories and concepts of science, which are a prerequisite for correct thinking and speech.

Practical (seminar) classes perform the following tasks:

- stimulate regular study of recommended literature, as well as attentive attitude to the lecture course;
- consolidate the knowledge gained in the process of lecture training and independent work on literature;
- expand the scope of professionally significant knowledge, skills, and abilities;
- allow you to verify the correctness of previously acquired knowledge;
- initiate skills of independent self-thinking, oral presentation;
- contribute to the free use of terminology;
- provide the teacher with the opportunity to systematically monitor the level of independent work of students.

Methodological guidelines for practical (seminar) classes on the discipline should be focused on modern business conditions, current regulatory documents, advanced technologies, the latest achievements of science, technology and practice, modern ideas about certain phenomena, the studied reality.

- Recommendations for working with literature.

Working with literature is an important stage of the student's self-work on mastering the subject, contributing not only to the consolidation of knowledge, but also to the expansion of horizons, mental abilities, memory, the ability to think, express and confirm personal hypotheses and ideas. In addition, the skills of research work necessary for further professional activity are developed.

When starting to study the literature on the topic, it is necessary to make notes, extracts, notes. It is mandatory to take notes of the works of theorists, which allow us to comprehend the theoretical basis of the study. For the rest, you can limit yourself to summary from the studied sources. All summaries and quotations must have the exact "return address" (author, title of the

work, year of publication, page, etc.). It is advisable to write an abbreviated title of the question to which the extract or quotation refers. In addition, it is necessary to learn how to immediately compile a file of special literature and publications of sources, both proposed by the teacher and identified independently, as well as refer to bibliographic reference books, chronicles of journal articles, book chronicles, abstract journals. At the same time, publications of sources (articles, book titles, etc.) should be written on separate cards, which must be filled in according to the rules of bibliographic description (surtitle, initials of the author, title of the work. Place of publication, publisher, year of publication, number of pages, and for journal articles – the title of the journal, year of publication, page numbers). On each card, it is advisable to record the thought of the author of the book or a fact from this book on only one specific issue. If the work, even in the same paragraph or phrase, contains more judgments or facts on another issue, then they should be written out on a separate card. The presentation should be concise, accurate, without subjective assessments. On the back of the card, you can make your own notes about this book or article, its content, structure, on which sources it is written, etc.

- Explanations about working with control and test materials for the course, recommendations for completing homework.

Testing allows you to determine whether the actual behavior of the program corresponds to the expected one by performing a specially selected set of tests. A test is the fulfillment of certain conditions and actions necessary to verify the operation of the function under test or part of it. Each question in the discipline must be answered correctly by choosing one option.

### **10. EDUCATIONAL SOCIAL WORK**

As part of the implementation of the discipline, educational work is carried out to form a modern scientific worldview and a system of basic values, the formation and development of spiritual and moral, civil and patriotic values, a system of aesthetic and ethical knowledge and values, attitudes of tolerant consciousness in society, the formation of students' need for work as the first vital necessity, the highest value and the main way to achieve success in life, to realize the social significance of your future profession.

## **11. THE LIST OF INFORMATION TECHNOLOGIES USED IN THE IMPLEMENTATION OF THE EDUCATIONAL PROCESS**

### **11.1 Information technologies**

For the educational process of the discipline is previewed the use of information technologies:

- practical classes using multimedia;
- interactive technologies (dialogues, collective discussion on various topics for realization a particular educational and professional task);
- interaction with students via e - mail;
- community work in the electronic information and educational environment of St. Petersburg State University: <https://spbguv.ru/academy/eios/>

### **11.2. Software**

**The list of licensed and free- distributed software, including national programs**

<b>№ п/п</b>	<b>Technical and computer programs recommended by sections and topics of the program</b>	<b>License</b>
1	MS PowerPoint	67580828
2	LibreOffice	free software
3	OS Alt Education	AAO.0022.00
4	ABIS “ MARK-SQL”	02102014155
5	MS Windows 10	67580828
6	System Consult Plus	503/KJI
7	Android OS	free software

**12. THE MATERIAL AND TECHNICAL BASE NECESSARY FOR THE IMPLEMENTATION OF THE DISCIPLINE EDUCATIONAL PROCESS.**

<b>The title of the discipline (module), practice in accordance with the curriculum</b>	<b>The title of special rooms and rooms for self-work</b>	<b>Equipment of special rooms and rooms for self-work</b>
Correction of unwanted behavior of animals	216(5, Chernigovskaya St., St. Petersburg, 196084) Classroom for seminar-type classes, group and individual consultations, current control and intermediate certification	<i>Specialized furniture:</i> seats, desks, chairs, whiteboard, TV, multimedia, VCR.
	316 (5, Chernigovskaya St., St. Petersburg, 196084) Classroom for seminar-type classes, group and individual consultations, current control and intermediate certification	<i>Specialized furniture:</i> desks, chairs, whiteboard, TV, multimedia, VCR.
	206 Large reading room (196084, St. Petersburg, Chernigovskaya str., 5) Room for self-work	<i>Specialized furniture:</i> tables, chairs <i>Technical means of education:</i> computers connected to the Internet and access to an electronic information and educational environment информационно-образовательную среду
	214 Small reading room (196084, St. Petersburg, Chernigovskaya str., 5) Room for self-work	<i>Specialized furniture:</i> tables, chairs <i>Technical means of education:</i> computers connected to the Internet and access to an electronic information and educational environment
	324 Information Technology Department (196084, St. Petersburg, Chernigovskaya str., 5) Room for storage and preventive maintenance of educational equipment	<i>Specialized furniture:</i> tables, chairs, special equipment, materials and spare parts for preventive maintenance of technical training facilities
	Box No. 3 Carpentry workshop (196084, St. Petersburg, Chernigovskaya str., 5) Room for storage and preventive maintenance of educational equipment	<i>Specialized furniture:</i> tables, chairs, special equipment, materials and spare parts for preventive maintenance of technical training facilities

## 2. List of assessment tools

**Table 2**

№	Title of the assessment tool	Brief description of the assesment tool	Presentation of the assessment tool in the fund
1.	Test	A system of standardized tasks, which allows to automate the assessment of students knowledge and skills	Fund of assessment tools for the discipline
2.	Report	The product of the student's independent work, which is a summary in writing of the results obtained theoretical analysis of a certain scientific (educational and research) topics, where the author reveals the essence of the problem under study, leads different points of view, as well as own views on it	Topics of reports

### 3. INDICATORS AND CRITERIA FOR ASSESSING COMPETENCIES AT VARIOUS STAGES OF ITS FORMATION, DESCRIPTION OF ASSESSMENT SCALES

Table 3

Planned results of competency acquired	The level of development			Assesment tool Satisfactory	
	Unsatisfactory	Satisfactory	Good		Unsatisfactory
PC-1 Anamnesis of animal life and disease to identify the cause of disease, conduct a general clinical study of animals in order to establish a preliminary diagnosis and determine the ongoing research program					
PC-1 ID-1To be able to collect and analyze information about the origin and purpose of animals, the method and conditions of husbandary, feeding (anamnesis of animal life), including use of sensor devices, mechanisms, sensors, tags, etc.	The level of knowledge is below the minimum requirements, gross errors have occurred	The minimum acceptable level of knowledge, many minor errors have been made	The level of knowledge corresponds to the training program, several minor errors have been made	The level of knowledge corresponds to the training program, no errors have been made	Tests, reports
PC-1 ID-2To be able to collect and analyze information about the occurrence and manifestation of animals diseases, previously transmitted diseases, epizootological conditions (anamnesis of animal disease), with the use of sensor devices, mechanisms, sensors, tags, etc.	Basic skills were not demonstrated in solving standard tasks, and gross errors occurred	Basic skills have been demonstrated, typical problems have been solved with minor errors, all tasks have been completed, but not in full	All the basic skills have been demonstrated, all the main tasks have been solved with minor errors, all the tasks have been completed in full, but some with flaws	All basic skills have been demonstrated, all main tasks have been solved with some minor flaws, all tasks have been completed in full	Tests, reports
PC-1 ID-3To be able to fix animals to ensure safety during a clinical trial	Basic skills were not demonstrated in solving	Basic skills have been demonstrated, typical problems	All the basic skills have been demonstrated, all	All basic skills have been demonstrated, all main tasks have been	Tests, reports

	standard tasks, and gross errors occurred	have been solved with minor errors, all tasks have been completed, but not in full	the main tasks have been solved with minor errors, all the tasks have been completed in full, but some with flaws	solved with some minor flaws, all tasks have been completed in full	
PC-1 ID-4 To be able to perform a clinical examination of animals, using common methods: examination, palpation, percussion, auscultation and thermometry.	Basic skills were not demonstrated in solving standard tasks, and gross errors occurred	Basic skills have been demonstrated, typical problems have been solved with minor errors, all tasks have been completed, but not in full	All the basic skills have been demonstrated, all the main tasks have been solved with minor errors, all the tasks have been completed in full, but some with flaws	All basic skills have been demonstrated, all main tasks have been solved with some minor flaws, all tasks have been completed in full	Tests, reports
PC-1 ID-5 To be able to establish a preliminary diagnosis based on anamnesis analysis and clinical research, using general methods.	Basic skills were not demonstrated in solving standard tasks, and gross errors occurred	Basic skills have been demonstrated, typical problems have been solved with minor errors, all tasks have been completed, but not in full	All the basic skills have been demonstrated, all the main tasks have been solved with minor errors, all the tasks have been completed in full, but some with flaws	All basic skills have been demonstrated, all main tasks have been solved with some minor flaws, all tasks have been completed in full	Tests, reports

PC-1 ID-6 To know the method of collecting animals anamnesis of life and disease.	Basic skills were not demonstrated in solving standard tasks, and gross errors occurred	Basic skills have been demonstrated, typical problems have been solved with minor errors, all tasks have been completed, but not in full	All the basic skills have been demonstrated, all the main tasks have been solved with minor errors, all the tasks have been completed in full, but some with flaws	All basic skills have been demonstrated, all main tasks have been solved with some minor flaws, all tasks have been completed in full	Tests, reports
PC-1 ID-7 To know the factors of animal life that contribute to the occurrence of infectious and non-infectious diseases.	Basic skills were not demonstrated in solving standard tasks, and gross errors occurred	Basic skills have been demonstrated, typical problems have been solved with minor errors, all tasks have been completed, but not in full	All the basic skills have been demonstrated, all the main tasks have been solved with minor errors, all the tasks have been completed in full, but some with flaws	All basic skills have been demonstrated, all main tasks have been solved with some minor flaws, all tasks have been completed in full	Tests, reports
PC-1 ID-8 To know the forms and rules for filling out the journal for the registration of sick animals and the animal's medical history, including in electronic form in accordance with the requirements of veterinary rules.	Basic skills were not demonstrated in solving standard tasks, and gross errors occurred	Basic skills have been demonstrated, typical problems have been solved with minor errors, all tasks have been completed, but not in full	All the basic skills have been demonstrated, all the main tasks have been solved with minor errors, all the tasks have been completed in full, but some with flaws	All basic skills have been demonstrated, all main tasks have been solved with some minor flaws, all tasks have been completed in full	Tests, reports

				but some with flaws		
PC-1 ID-9 To know the methods of animals' fixation during clinical examination.	The level of knowledge is below the minimum requirements, gross errors have occurred	The minimum acceptable level of knowledge, many minor errors have been made	The level of knowledge corresponds to the training program, several minor errors have been made	The level of knowledge corresponds to the training program, no errors have been made	Tests, reports	
PC-1 ID-10 To know the technique of conducting an animal clinical study, using general methods, in accordance with the guidelines, instructions, rules for the diagnosis, prevention and treatment of animals.	The level of knowledge is below the minimum requirements, gross errors have occurred	The minimum acceptable level of knowledge, many minor errors have been made	The level of knowledge corresponds to the training program, several minor errors have been made	The level of knowledge corresponds to the training program, no errors have been made	Tests, reports	

#### **4. LIST OF CONTROL TASKS AND OTHER MATERIALS REQUIRED TO ASSESS KNOWLEDGE, SKILLS AND EXPERIENCE THAT CHARACTERIZE THE STAGES OF FORMING COMPETENCIES IN THE PROCESS OF MASTERING THE EDUCATIONAL PROGRAM**

##### **4.1. Typical tasks for monitoring progress**

##### **4.1.2. Topics of the reports**

Topics of reports for competency assessment:

**PC-1 Anamnesis of animal life and disease to identify the cause of disease, conduct a general clinical study of animals in order to establish a preliminary diagnosis and determine the ongoing research program**

PC-1 ID-1 To be able to collect and analyze information about the origin and purpose of animals, the method and conditions of husbandary, feeding (anamnesis of animal life), including use of sensor devices, mechanisms, sensors, tags, etc.

PC-1 ID-2 To be able to collect and analyze information about the occurrence and manifestation of animals diseases, previously transmitted diseases, epizootological conditions (anamnesis of animal disease), with the use of sensor devices, mechanisms, sensors, tags, etc.

PC-1 ID-3 To be able to fix animals to ensure safety during a clinical trial

PC-1 ID-4 To be able to perform a clinical examination of animals, using common methods: examination, palpation, percussion, auscultation and thermometry.

PC-1 ID-5 To be able to establish a preliminary diagnosis based on anamnesis analysis and clinical research, using general methods.

PC-1 ID-6 To know the method of collecting animals anamnesis of life and disease.

PC-1 ID-7 To know the factors of animal life that contribute to the occurrence of infectious and non-infectious diseases.

PC-1 ID-8 To know the forms and rules for filling out the journal for the registration of sick animals and the animal's medical history, including in electronic form in accordance with the requirements of veterinary rules.

PC-1 ID-9 To know the methods of animals' fixation during clinical examination.

PC-1 ID-10 To know the technique of conducting an animal clinical study, using general methods, in accordance with the guidelines, instructions, rules for the diagnosis, prevention and treatment of animals.

1. Hormones and development of mammalian behavior
1. Nature of aggression
2. Instinct and learning
3. Animal games
4. Eating behavior
5. Defensive behavior in dogs
6. Defensive behavior in cats
7. Intelligence in animals
8. Communication and animal language.
9. Ways of communication in dogs
10. Ways of communication in cats
11. Sensory organs. Analyzers
12. Ways of animal communication
13. Effects of hormones on animal behavior
14. Psychological aspects of wild canid behavior.
15. Psychological aspects of dog behavior.
16. Psychological aspects of wildcat behavior
17. Psychological aspects of the behavior of domestic cats
18. Disobedience and treatment

19. Behavioral problems of old animals
20. Uncleanliness of cats (pathogenesis, symptoms, differential diagnosis, treatment, prognosis)
21. Uncleanliness of dogs (pathogenesis, symptoms, differential diagnosis, treatment, prognosis)
22. Destructive behavior in dogs
23. Destructive behavior in cats
24. Aggression and its types.
25. Behavioral first aid in cases of pet aggression
26. Correction of unwanted aggressive behavior
27. Neurophysiological basis of aggression
28. Anxiety disorders (pathogenesis; symptoms; treatment: behavior modification and pharmacological intervention, prognosis)
29. Associative learning (formation of conditional reflexes).
30. Reinforcements.
31. Punishment and its forms.
32. Non-associative learning (habituation).
33. Behavior modification methods
34. Influence of age on attachment formation.
35. Causes of behavioral problems
36. Violation of maternal behavior.
37. Eating disorder.
38. Coprophagia
39. Types of reproductive behavior disorders.
40. Role of ferromons in animal reproduction
41. Raising puppies and kittens and their initial training.
42. Types of abnormally sexual behavior
43. Fears of dogs and cats, methods of correction.
44. Ethological principles for the prevention of animal diseases

#### 4.1.3. Tests

Competency assessment tests:

**PC-1 Anamnesis of animal life and disease to identify the cause of disease, conduct a general clinical study of animals in order to establish a preliminary diagnosis and determine the ongoing research program**

PC-1 ID-1 To be able to collect and analyze information about the origin and purpose of animals, the method and conditions of husbandary, feeding (anamnesis of animal life), including use of sensor devices, mechanisms, sensors, tags, etc.

PC-1 ID-2 To be able to collect and analyze information about the occurrence and manifestation of animals diseases, previously transmitted diseases, epizootological conditions (anamnesis of animal disease), with the use of sensor devices, mechanisms, sensors, tags, etc.

PC-1 ID-3 To be able to fix animals to ensure safety during a clinical trial

PC-1 ID-4 To be able to perform a clinical examination of animals, using common methods: examination, palpation, percussion, auscultation and thermometry.

PC-1 ID-5 To be able to establish a preliminary diagnosis based on anamnesis analysis and clinical research, using general methods.

PC-1 ID-6 To know the method of collecting animals anamnesis of life and disease.

PC-1 ID-7 To know the factors of animal life that contribute to the occurrence of infectious and non-infectious diseases.

PC-1 ID-8 To know the forms and rules for filling out the journal for the registration of sick animals and the animal's medical history, including in electronic form in accordance with the requirements of veterinary rules.

PC-1 ID-9 To know the methods of animals' fixation during clinical examination.

PC-1 ID-10 To know the technique of conducting an animal clinical study, using general methods, in accordance with the guidelines, instructions, rules for the diagnosis, prevention and treatment of animals.

1. What is the title of the method of zoopsychology and comparative psychology, which consists in studying the history of the development of the psyche of living beings and identifying its qualitative differences in various representatives of the animal world?

1. *phylogenetic*
2. ontogenetic
3. parthenogenetic

2. What is the title of the direction of science that studies the manifestations, patterns and evolution of mental reflection in animals of different levels of development?

1. ethology
2. *zoopsychology*
3. psychology

3. What is the title of the transfer to animals, mental properties and abilities inherent in reality only to humans?

1. *anthropomorphism*
2. anthropophysiology
3. anthropoevolutionism

4. What is the title of a special category of individual behavior when some environmental objects are used to influence others as means that increase the effectiveness of behavior in any sphere of life or even the level of all behavior in general?

1. *gun activity*
2. subject activity
3. professional activities

5. What is the title of instinctive behavior, which is usually stimulated by certain internal factors?

1. In the form of opportunities
2. *In the form of needs*
3. In the form of needs

6. What is the main basic branch of zoopsychology?

1. general psychology
2. gestalt psychology
3. general nosology

7. What is the title of a behavior that is built according to a hereditary program and does not require special learning or training for its development?

1. acquired activities
2. *innate actions*
3. congenitally acquired actions

8. What is Anthropogenesis?

1. The process of evolutionary-historical formation of society
2. The process of evolutionary-historical formation of an animal
3. *The process of evolutionary-historical formation of man*

9. What is the title of the study method that is characterized by active intervention on the part of the researcher who systematically manipulates one or more variables (factors) and records concomitant changes in the behavior of the studied object?

1. observation
2. *experiment*
3. organization

10. What is the title of the borderline field of psychology, adjacent to the physiology of higher nervous activity, focused on establishing correlations between mental phenomena and physiological processes that are recorded by objective methods?

1. *psychophysiology*
2. behaviorism
3. ethology

11. What is the title of the set of specifically juvenile manifestations of all forms of animal behavior, characteristic mainly of young individuals?

1. *game*
2. food
3. aggressive

12. What is the driving and guiding force behind evolution?

1. *natural selection*
2. artificial selection
3. mutation

13. What is the title of a specific form of teaching, in which the distinctive features of objects of some innate behavioral acts of parental individuals are recorded?

1. bodybuilding
2. *imprinting*
3. running

14. What is the title of the method that is used when solving problems using foreign objects?

1. *use of tools*
2. use of tools
3. use of tools

15. What is the title of the totality of actions of an individual with an object aimed at its adequate use in adaptive activity?

1. gun activity
2. instrumental activity
3. *manipulation activity*

16. What is taxis?

1. *is the body's response, oriented relative to the source of irritation*
2. is the body's response, oriented relative to the source of damage
3. is the body's response, oriented relative to the source of alienation

17. What are the main methods of zoopsychology and comparative psychology?

1. observation
2. observation and experiment
3. *observation and experience*
4. experiment

18. What is the title of the method of zoopsychology and comparative psychology, which consists in measuring the psyche of animals by the scale of the human psyche?

1. *subjective*
2. objective

19. What is the title of the method in zoopsychology and comparative psychology, which consists in studying the psyche of a group of living organisms based on comparing their behavior with the behavior of those living beings that precede and follow this group in evolution?

1. *biological*
2. evolutionary
3. psychological

20. What does not apply to methods for studying animal behavior in populations?

1. troping
2. *using a workaround*
3. using labeling of animals with radioactive isotopes
4. biotelemetry method

21. What is not related to the general properties of the daily rhythm?

1. *exogeneity*
2. endogeneity
3. lag effect
4. adaptability

22. How many levels of mental development stand out in the psychological classification of animals?

1. *2 to 3 levels*
2. 3 to 4 levels
3. 4 to 5 levels

23. What is the title of the process of development of an individual organism?

1. phylogeny
2. *ontogenesis*
3. parthenogenesis

24. What did K. Lorenz call the deep attachment of newborn animals to the first moving object?

1. inbreeding
2. outcrossing
3. *imprinting*

25. What is the title of the method, which consists in finding a path to a target object that is not directly perceived - food, shelter, etc.?

1. *labyrinth*
2. workaround
3. sample samples

26. What section is Ethology?

1. Psychology section
2. *Biology section*
3. Section of zoopsychology

27. What is the title of the list of behavioral acts characteristic of the species?

1. *etogramma*
2. cardiogram
3. cartogram

28. What is the title of the direction of research, in which the abilities to teach animals of different evolutionary stages of development are compared, the general and different in the psyche of animals and humans are studied?

1. comparative zoopsychology
2. *comparative psychology*
3. behavior genetics

29. What is the title of the systemic property of highly organized matter, which consists in the active reflection of the objective world?

1. *mentality*
2. reason
3. thinking

30. What is the unit of the evolutionary process?

1. population
2. individual
3. community

31. Who is inherent in the psyche that appeared only at a certain stage in the development of the organic world?

1. to all living beings
2. *only highly organized living things*
3. only to man

32. What is the title of the general cognitive ability that determines the readiness for the assimilation and use of knowledge and experience, as well as for reasonable behavior in problem situations?

1. mind
2. *intelligence*
3. reason

33. What is the title of a behavior that involves all types of animal interactions in a community, the range of which is very wide?

1. social
2. parental
3. informative

34. What is Reflex?

1. *natural response to stimulus*
2. natural response to the pathogen
3. regular response to the fastener

35. What is the title of the behavior associated with seeking refuge, avoiding dangers, guarding cubs?

1. *protective*
2. maternal
3. parental

36. What is an animal's aggressiveness?

1. acquired property
2. *innate property*
3. the result of imitation

37. What is the acquisition and accumulation in ontogeny of individual experience in accordance with the specific habitat conditions of the individual?

1. training
2. *learning*
3. coaching

38. What is the direction according to which the behavior of an animal (and a person) is reduced to a complex of secretory and muscle reactions of the body to external stimuli?

1. *behaviorism*
2. *gestaltpsychology*
3. *ethology*

39. What is the title of the process of developing skills in animals with targeted human exposure?

1. coaching
2. *training*
3. pushing

40. What is the title of behavior in a new situation for an animal, based on its emergency decision-making, without prior learning and in the absence of an appropriate hereditary program?

1. instinct
2. *elementary rational activity*
3. reflex

## **4.2. Typical tasks for intermediate qualification**

### **4.2.1. List of the questions for credit**

#### **Competency assessment:**

**PC-1 Anamnesis of animal life and disease to identify the cause of disease, conduct a general clinical study of animals in order to establish a preliminary diagnosis and determine the ongoing research program:**

PC-1 ID-1 To be able to collect and analyze information about the origin and purpose of animals, the method and conditions of husbandary, feeding (anamnesis of animal life), including use of sensor devices, mechanisms, sensors, tags, etc.

1. *What is the subject and object of zoopsychology?*
2. *What periods are distinguished in the ontogeny of animal behavior?*
3. *Hormones and development of mammalian behavior*
4. *The role of the veterinarian in addressing behavioral problems.*
5. *Behavior modification methods*
6. *Facilities for training, training and behavior modification.*

**PC-1 ID-2** To be able to collect and analyze information about the occurrence and manifestation of animals diseases, previously transmitted diseases, epizootological conditions (anamnesis of animal disease), with the use of sensor devices, mechanisms, sensors, tags, etc.

1. *The role of socialization in shaping behavior.*
2. *List periods of increased susceptibility*
3. *Pedigree features of communicative behavior.*
4. *Influence of age on attachment formation.*

5. *Associative learning (formation of conditional reflexes). Respondent and operant behavior.*

6. *Reinforcements. Reinforcement regimes.*

**PC-1 ID-3** To be able to fix animals to ensure safety during a clinical trial

1. *Punishment and its forms.*

2. *Non-associative learning (habituation).*

**PC-1 ID-4** To be able to perform a clinical examination of animals, using common methods: examination, palpation, percussion, auscultation and thermometry.

1. *Behavioral problems of old animals*

2. *Behavioral counseling methodology*

3. *Owner Contact Procedure*

**PC-1 ID-5** To be able to establish a preliminary diagnosis based on anamnesis analysis and clinical research, using general methods.

1. *List typical dog and cat behavior issues.*

2. *Causes of behavioral problems*

1. *Anxiety mechanisms.*

2. *Evolutionary-biological basis of aggression*

**PC-1 ID-6** To know the method of collecting animals anamnesis of life and disease.

1. *Compulsive behavior (obsessive neurosis).*

2. *Fears, phobias, panic disorders.*

3. *Neurophysiological basis of aggression.*

**PC-1 ID-7** To know the factors of animal life that contribute to the occurrence of infectious and non-infectious diseases

1. *Uncleanness of cats. Aversion to place or substrate*

2. *Uncleanness of cats. Site or substrate preference*

3. *Uncleanness of cats. The role of anxiety in the development of uncleanness in cats*

4. *Uncleanness of cats. Urinary labeling (sexual and reactive labeling)*

5. *Uncleanness of dogs, as a result of mistakes of owners (insufficient training in the rules of behavior in the house, insufficient walking, learned behavior, attention-seeking behavior)*

6. *Uncleanness of dogs. Preference for a specific substrate*

7. *Uncleanness of dogs. Territory tagging behavior*

8. *Uncleanness of dogs. Clinical disorders (separation anxiety, urination as a manifestation of compliance, state of fear or overexcitation)*

**PC-1 ID-8** To know the forms and rules for filling out the journal for the registration of sick animals and the animal's medical history, including in electronic form in accordance with the requirements of veterinary rules

1. *Clinical and laboratory examination for diagnostic testing of somatic and behavioral disorders*

2. *Classification and mechanism of action of psychotropic drugs*

3. *Anxiolytics*

4. *Antidepressants*

5. *Neuroleptics*

6. *Drugs of other groups and biologically active substances*

7. *Peculiarities of prescribing psychotropic drugs*

8. *Drugs as an aid in solving behavioral problems*

**PC-1 ID-9** To know the methods of animals' fixation during clinical examination.

1. *Predatory aggression (pathogenesis, symptoms, dif. diagnosis, treatment)*

2. *Dominant aggression (pathogenesis, symptoms, dif. diagnosis, treatment)*

3. *Idiopathic aggression (pathogenesis, symptoms, dif. diagnosis, treatment)*

**PC-1 ID-10** To know the technique of conducting an animal clinical study, using general methods, in accordance with the guidelines, instructions, rules for the diagnosis, prevention and treatment of animals.

1. *What is unwanted animal behavior.*
2. *What could be the nature of aggression?*
3. *Game aggression (pathogenesis, symptoms, diff. diagnosis, treatment)*
4. *Maternal aggression (pathogenesis, symptoms, dif. diagnosis, treatment)*
5. *Aggression due to fear (pathogenesis, symptoms, diff. diagnosis, treatment)*
6. *Aggression due to pain (pathogenesis, symptoms, diff. diagnosis, treatment)*
7. *Territorial aggression (pathogenesis, symptoms, dif. diagnosis, treatment)*
8. *Intraspecific aggression (pathogenesis, symptoms, dif. diagnosis, treatment)*
9. *Forwarded aggression (pathogenesis, symptoms, dif. diagnosis, treatment)*
10. *Food aggression (pathogenesis, symptoms, diff. diagnosis, treatment)*
11. *Possessive aggression (pathogenesis, symptoms, dif. diagnosis, treatment)*

**5. METHODOLOGICAL MATERIALS DEFINING THE PROCEDURES FOR  
ASSESSING KNOWLEDGE, SKILLS AND ABILITIES  
AND WORK EXPERIENCE CHARACTERIZING THE STAGES OF  
COMPETENCE FORMATION**

Criteria for assessing the knowledge of students during testing:

The test result is evaluated on a percentage rating scale. Each student is offered a set of test tasks of 25 questions:

- The mark "**excellent**" is 25-22 correct answers.
- The mark "**good**" is 21-18 correct answers.
- The mark "**satisfactory**" is 17-13 correct answers.
- The mark "**unsatisfactory**" is less than 13 correct answers

Criteria for assessing students' knowledge during report:

- The mark "**excellent**" - the problem is identified and its relevance is justified; an analysis of various points of view on the problem under consideration is made and one's own position is logically stated; conclusions are formulated, the topic is fully disclosed, the volume is maintained; the requirements for external design are met, the basic requirements for the report are fulfilled.
- The mark "**good**" - mistakes have been made. In particular, there are inaccuracies in the presentation of the material; there is no logical consistency in judgments; the volume of the report is not maintained; there are omissions in the design, there are significant deviations from the requirements for the presentation of materials.
- The mark "**satisfactory**" - the topic is only partially covered; factual errors were made in the content of the report; there are no conclusions, the topic of the report is not disclosed.
- The mark "**unsatisfactory**" - there is a significant misunderstanding of the problem or the report is not submitted.

Criteria of knowledge during the test

- The mark "**accepted**" must correspond to the parameters of any of the positive ratings ("excellent", "good", "satisfactory").
- The mark "**not accepted**" rating should correspond to the parameters of the "unsatisfactory" rating.
- The mark "**excellent**" – all types of educational work provided for in the curriculum have been completed. The student demonstrates the compliance of knowledge, skills, and abilities with the indicators given in the tables, operates with acquired knowledge, skills, and applies them in situations of increased complexity. At the same time, inaccuracies, difficulties in

analytical operations, transfer of knowledge and skills to new, non-standard situations may be allowed.

- The mark **"good"** – all types of educational work provided for in the curriculum have been completed. The student demonstrates the compliance of knowledge, skills, and abilities with the indicators given in the tables, operates with acquired knowledge, skills, and applies them in standard situations. At the same time, minor errors, inaccuracies, difficulties in analytical operations, transfer of knowledge and skills to new, non-standard situations may be made.
- The mark **"satisfactory"** – one or more types of educational work provided for in the curriculum have not been completed. The student demonstrates incomplete compliance of knowledge, skills, and abilities with the indicators given in the tables, significant errors are made, a partial lack of knowledge, skills, and skills is manifested in a number of indicators, the student experiences significant difficulties in operating with knowledge and skills when transferring them to new situations. –
- The mark **"unsatisfactory"** – the types of educational work provided for in the curriculum have not been completed. demonstrates incomplete compliance of knowledge, skills, and abilities given in the tables of indicators, significant errors are made, a lack of knowledge, skills, and skills is manifested for a large number of indicators, the student experiences significant difficulties in operating knowledge and skills when transferring them to new situations

## 6. ACCESSIBILITY AND QUALITY OF EDUCATION FOR DISABLED PEOPLE

If necessary, persons with disabilities and persons with disabilities are given additional, time to prepare an answer for the test.

When conducting the procedure for evaluating the learning outcomes of disabled people and persons with disabilities, their own technical means can be used.

The procedure for evaluating the learning outcomes of disabled people and persons with disabilities in the discipline provides for the provision of information in forms adapted to the limitations of their health and perception of information:

For people with visual impairments:	– in printed form in enlarged font; – in the form of an electronic document.
For people with hearing impairments:	– in printed form; – in the form of an electronic document.
For people with disorders of the musculoskeletal system:	– in printed form, the device; – in the form of an electronic document.

When conducting the procedure for evaluating the learning outcomes of disabled people and persons with disabilities in the discipline, it ensures that the following additional requirements are met, depending on the individual characteristics of the students:

a) instructions on the procedure for conducting the assessment procedure are provided in an accessible form (orally, in writing);

b) an accessible form of assignment of assessment tools (in printed form, in printed form in enlarged font, in the form of an electronic document, assignments are read out by the teacher);

c) an accessible form of providing answers to tasks (written on paper, a set of answers on a computer, orally).

If necessary, for students with disabilities and the disabled, the procedure for evaluating the results of training in the discipline can be carried out in several stages.

The procedure for evaluating the learning outcomes of disabled people and persons with disabilities is allowed using distant learning technologies.
